## Connection

## Electrical connections - as per NFC15-100 norm

⚠ This connection must be made by a qualified technician. Whilst making the connection, the transmitter must not be energized.

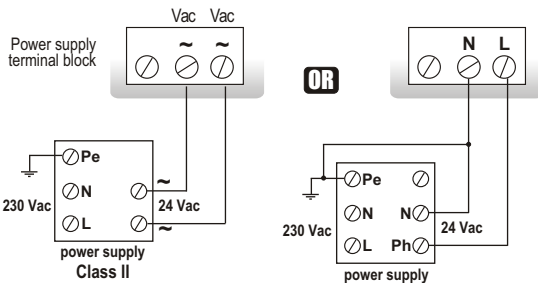

### Power supply connection :

⚠ Before making the connection, you must first check the power supply which is indicated on the transmitter board (see (i) on connection drawing).

• For 24 Vdc power supply models :

• For 24 Vac power supply models :

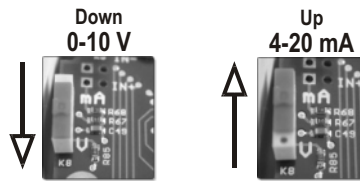

• For 115 or 230 Vac power supply models :

### Output signal selection voltage (0-10 V) or current (4-20 mA)

The on-off switch located on the left top of the transmitter (see (h) on connection drawing) allows selection of the required outputs.

### Output connection :

## Digital communication

### RS 232 communication

- Via the RS 232 connection, the TH200 can transmit its measurements to a KIMO Class 300 transmitter.

Example : a CP300 can display (in addition to the pressure) other parameters such as humidity and temperature from a TH 200.

- Via the RS 232 connection, you can also configure your transmitter with the LCC-300

- The RS 232 connection cable is available in 2 m, 5 m or 10 m (maximum) lengths.

## Configuration

You can configure all the parameters of the transmitter : **units, measuring ranges, alarms, outputs, channels, calculation formula...** via the different methods shown below :

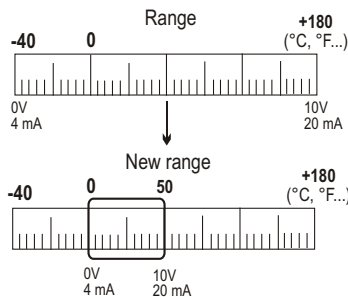

- **Via keypad** : only on models with display  
A code-locking system combined with keypad guarantees the security of the installation. See configuration manual.
- **Via software** (optional) : on all models.  
Simple user-friendly configuration. See LCC-300 user manual.

### Configurable analogue outputs

Configure the range according to your needs: outputs are automatically adjusted to the new measuring range.

Range with centre zero (-40/0/+40°C), with offset zero (-30/0/70°C), or standard range (0/100 °C) => you can configure your own intermediate ranges according to your needs, between 10% and 100% of the full scale.

The minimum configurable range is 10% of the full scale.

## Options

- LCC-300 configuration software with RS 232 cable
- Calibration certificate

## Optional accessories

- EHK 500 reference portable instrument
- Mounting brackets
- Sliding fittings
- Connection fittings
- Protection tips
- Caps for tips
- Wall-mounting support bracket for remote humidity probe.

## Calibration

### On-site adjusting and calibration :

The EHK 500 is a reference portable instrument which enables you to adjust at one point on the TH 200 and TH 300, by correcting any offset whilst measuring in a single ambient environment, housing both sensing elements. You can also adjust at several points.

### Output diagnostics :

With this function, you can check with a multimeter (or a regulator/display, or a PLC/BMS) if the transmitter outputs work properly. The transmitter generates a voltage of 0 V, 5 V and 10 V or a current of 4 mA, 12 mA and 20 mA.

### Certificate :

- Class 300 transmitters are supplied with adjusting certificates. Calibration certificates are offered as an option.
- The Smart-Pro humidity probes are supplied with adjusting certificates and can also be supplied with calibration certificates offered as an option.

## Mounting

To install the transmitter on a wall: fix the stainless steel plate to the wall (this plate is supplied with the transmitter).

Drill 8mm holes and mount the plate with the screws and wall-plugs supplied with the transmitter.

Insert the transmitter on the plate (see A on the drawing shown below), by aligning it at 30°. Rotate its housing in clockwise direction until you hear a "click" which confirms that the transmitter is correctly installed. Then, open the housing, lock the clamping system of the housing on the plate, with the screws as shown (to remove the transmitter from the plate, remember to remove the screws first).

## Maintenance

Avoid aggressive solvents.

Protect the transmitter and probes from any cleaning product containing formol, which may be used for cleaning rooms or ducts.
